

2  
Browne, 1625.

¶ A New Almanacke and Prognostication  
for the yeere of our Lord  
God, 1625.

*Being the first from Bissextile.*

With briefe Tables of the foure  
Termes, and their Returnes.

Composed and properly referred  
to the longitude and latitude of  
the pole Arctick of the famous  
Citty of London, and may  
serue generally for the most part  
of Great-Britaine.

By Daniel Browne, well-willer  
to the Mathemat.

*Astra regunt homines, & re-  
git astra Deus.*

Printed for the Company of  
Stationers.

# Iuly hath xxxi. daies.

Goodnight blood-letting, thet many phantasies & griefes cures: in lieu of medicines let cooling victuals and bathes bled with discretion suffice: play and sleepe moderately. Dogge and Lyon reigne like Vulcan hot as a Furnace.

August hath xxxi. dayes.

Physicke adiecto, whilst scorching Syrius bittereth his  
out-rage: from trauelling refraine: small eating brings  
very great ease: sleepe but a little, lize very well, but lust  
very little. Dog hath a day, and a weeke, and a moneth,  
and dead is the mad Dogge.

The Vse of this Table.

Adding the houres adioyning to the Ports in this Table contained, vnto the moones coming South, produceth the time of the Tide in the same Ports: Example, the moone is 9 dayes old, now in this Table vnder the age of the moone, I finde 9 in the first vace, then in the second, there I finde her coming to the South at 7. and 12. minutes. Now for London or Buseay, I finde it in the last space 3. houres, which added to 7. houres 12. minutes, maketh 10. houres and 12. minutes, the time of which high water at London or Buseay the same 9. day of the age of the moone. the like order is to be obserued in all other Ports. Note that 60 minutes make an houre: But if the houres a mount aboue 12. call the 12. away, the rest is your request; but if vnder 12. then that that cometh of that addition, is the time of high water there. as aforesayd.

**A briefe Declaration of the  
Disposition of the foure Quarters  
of this Yeare 1625.**

Sol in ♍, ☊, ♋.

*Hereafter the Winter, the Spring, the Summer,  
and Haruest, shall not cease so long as the earth  
remaineth.*

**VV**inter according to our English account began the  
last yeere 1624. at the time of the Sunnes Ingre-  
dience into that cold and dry signe Capricorne, viz.  
11. of December at 9. and 11. at night, at which time was  
the Brumall Solstice or shortest day in the yeere by reason of the  
Sunnes greatest South declination from the Equinodiall &c.  
and continueth in this yeere 1625. untill the 11. day of March,  
1 houre 6 min. in the morning, the nature of this quarter is  
cold and moyst, and is of flegmaticke complexion, receiuing  
the nature of the three signes ♍, ☊ and ♋: Capricorne is  
cold and dry, vntemperate. Aquari is hot and moyst, vntempe-  
rate. Pisces is cold and moyst, declining from temperature,  
and tending to destruction, but yet imparting some comfort  
to diuers things vegetable. Sickneses of the Winter, gripes  
in the sides, Rhume, Coughs, Joynt-ache, and Head-ache,  
and the Stone.

A cold and moyst Winter is profitable, yet too much cold  
destroies such tender trees as reioyce vnder a warme climate,  
a warme and moyst Winter is vnholsome.

☛ The Spring, Sol in ♈, ♉, and ♊.

He causeth grasse to grow for the cattell, and hearbs  
for the vse of man, that hee may bring forth bread out  
of the earth.

**T**he Sunne hauing fully finished the Winter, with the last  
part of Pisces, at his entrance into the first minute of  
Aries, making the artificiall day equall with the night.

## A Prognostication.

he reuolueth the most delectable annuall reuolution, called the Spring, which will be this yeare the xi of day of March, at two a clocke & 2 min. in the morning. Sol is the light of the World, and looketh vpon all things, and all the workes thereof is full of the glory of the Lord, nothing is hid from the brate of Sol, for all augmenrations, increasements, and ripeness of fruits, beasts, and other things vpon the earth, is of the Sunne, he is also the giver of times; and therefore at this time he reuolueth, the most delectable season called the Spring. The nature of the three signes  $\Upsilon$ ,  $\delta$ ,  $\text{II}$ .  $\Upsilon$  is fiery hot, and by peculiar property dry, by his heate; and quickning drynesse, preserving life, fit for the nourishment of all things animal, and vegetatine,  $\delta$  is cold and dry, temperate, profitable to the earth, bud, and flowers, springing there from.  $\text{II}$  is hot and moyst affecting the ayre, with a temperate dispoise, comforting nature, and naturall heate, producing the seedes to fruites; & the sicknesses of the Spring, falling sickness, Squinances, Coughes, Ache in the reines and lerte.

A warme and moyst Spring is commendable, if the Spring be dry and somewhat warme, there shall be but little fruite yet very good; if cold, the fruite will be rotten and slow or neuer come to be ripe.

The Summer, Sol in  $\zeta$ ,  $\eta$ , and  $\text{III}$ .

Go to the Pismire, O sluggard, behold her wayes, and be wise  
for shee prepareth her meate in Summer.

**S**ummer beginneth at the Sunnes ingresse into the beginning of Cancer, at which time hee is in his nearest to our Verticall poyn, making his greatest declination towards the North, from the Aequinoctiall, and causing the Aestiuall or Summer Solstice; and per consequens, the longest day, and shortest night in the yeere, which will be this yeer the xi day the 9. houre at night minute 46. The nature of the three signes,  $\zeta$ ,  $\eta$ , and  $\text{III}$ . Cancer is cold and moyst, temperate, apt for the mitigation of Nature, hauing a comfortable humidity, and temperate, whereby all things both animal and vegetable do line and are maintained.  $\eta$  is fiery hot, and dry, so farre remote from temperature, that with it first beginneth Nature to mooue to the diminution of the leanes of trees, and abatement of fruites tending to their decay:  $\text{III}$  the in

fluence

fluence thereof vpon the earth worketh cold and sickness, hardly temperate but tending to destruction; rather through the which albeit all vegetable things receiue some detriment and diminution, hearbes doe wither, and leaues of trees fall: sicknesses of Summer, burning feuers, Comits, Blisters, with immoderate sweatings.

Much rayne in Summer putrifies the fruites, and there shall be no great store of graine: many sicknesses will follow, if it be ener dry, it argueth scarcity in all manner of graine, the Summer fruites will be wholsome fishes shall die, if ouer hot there will be many sicknesses, and store of fruite that Summer, If (to conclude) it be cold, the yeere will be wholsome, but the fruites will be late: so the Elements must be well tempered, else the earth cannot be fructifull: Which God grant they may.

The Haruest. Sol in ♌, ♍, and ♎.

Let vs now feare the Lord our God, that giueth raine both early and late in due season: he reseruech vnto vs the appointed weekes of the Haruest.

The Haruest Quarter, or fall of the leafe, beginneth at the time of the Sun entring into the first minute of the second Aequinoctiall Signe Libra, taking place this yeere the xiii day of September, at 9 and 28 minutes in the morning, when the Day and Night, accord secondly, in equall length. The nature of the three Signes, ♌, ♍, and ♎. ♌ it imprinteth into the ayre, heate and moisture, somewhat declining from temper, causing it to be thicke and grosse mixt, and vertible to the indiuiduall kinds of Nature, as seedes, hearbes, and boughes of Trees. ♍ it imparteth to the ayre coldnesse and moisture, exempted from all temperature, bringing rather corruption then generation. ♎ it is hot and drye void of temperature, causing destruction of seedes, and hearbs, and hurt to many living creatures. Sicknesses which commonly doe happen in Autumne, are oppilations of the Spleene, Dropsies, Consumptions, Ache in the backe bone, fretting of the bowels, from which and all other diseases, especially the diseases of the soule. Good Lord deliuer vs.

A cold and dry Autumne is laudable: much moisture doth putrifie the Winter, the beginning very dry, the last part moist shewes penury of fruite the ensuing yeare, if the first part be hot it will be full of sicknesses, if too cold it is hurt to fruite by gathered.

## A Prognostication.

Astrologers say, that among all the other Planets the **Moone** (in ruling) hath most power and mastery of mens bodies. Ptolomeus sayth, vnder the Moone is contained sickness, harins, and damage: therefore about the alteration of mans body, the Moone worketh most principally. So likewise the Moone being Passiva qualitatis, collecteth and retayneth the good or euill influence of that Planet, to whom shee is adjoined or applyeth, as Hennes sayth; and therefore the moone is ill affected and becommeth infortunate when shee is eyther copozally conuorned with Saturne, Mars, or Sol; or otherwise aspectually coupled with either of them by a quartile or diametrical irradiation, insonmuch that such dayes in euery month is to bee accounted more dangerous then the rest to fall sicke in, which I haue noted in my Almanacke, with their Characters thus  $\zeta$  a Coniunction.  $\square$  a Quartile. an  $\circ$  Opposition. Furthermore the moone with the fortunes or good Planets, as Jupiter or Venus, or aspected well of them tendeth to good: contrariwise with the infortunes or euill Planets as Saturne, or Mars, or euill aspected of them doth pronounce euill essence of the sicknesses. Which agreeth to the saying of Ptolomeus in the 16 Aphorisme of his Centiloquio. If any object, that this was the opinion of an Heathen: Mr. Calvin granteth this also, that melancholy, choler, and other humours, are mooued and wrought by the Planets; and this was the opinion of a great diuine. And by the censure of the great Astrologicall and Theologicall Doctor Frauncis Iunctinus, that by the motion of the moone and Planets are knowne the Criticall and dangerous dayes, when the sickness will bee more grievous and vehement and when it will be more remisse and placable. And in what dayes it is conuenient to vse outward, or inward medicines.

Concerning cautions in illustration in Physicke, as purgations, laxatiue, or phlebotomie seeing the fore sight, and prevention of such especially appertaineth to the learned in Physicke, where in they can helpe themselves, and other, God giuing a blessing to their practise, for of the most high commeth healing. I commit them to the consideration of the learned, in that excellent Science of Physicke.

### *The Characters of the 7. Planets.*

$\text{\textcircled{S}}$  Saturne,  $\text{\textcircled{J}}$  Iupiter,  $\text{\textcircled{M}}$  Mars,  $\text{\textcircled{O}}$  Sol,  $\text{\textcircled{V}}$  Venus,  $\text{\textcircled{M}}$  Mercury, and  $\text{\textcircled{L}}$  Luna.

The

The Characters of the 12. signes of  
the Zodiacke.

♈ Aries, ♉ Taurus, ♊ Gemini, ♋ Cancer, ♌ Leo, ♍ Virgo,  
♎ Libra, ♏ Scorpio, ♐ Sagitarius, ♑ Capricorne, ♒  
Aquarius, ♓ Pisces,

Protolomeus in his 86. propo. of his Centilog. discoursing of  
virtues, sayth, that ☉ Sol is the beginning of the vitall power,  
which belongeth to the heart: ☾ Luna is the originall of the  
virtue naturall of the Liver.

♄ Saturne is the Gouvernour of the vertue reſcriptive.

♃ Jupiter is the Gouvernour of the vertue cressent and quick-  
ning.

♂ Mars is the Gouvernour of the vertue of anger and at-  
traction.

♀ Venus is the Gouvernour of the vertue of lust and appetite.

☿ Mercury is the Gouvernour of the vertue of imagination  
and fantasie, and cogitation.

The Chaldeans say, that the influence of Saturne operateth  
in apprehension; the influence of Jupiter in action; and the in-  
fluence of Mars in execution.

The Hebrewes tearme Saturne quite peaceable contempla-  
tive: Jupiter lust and wile; and Mars strong and full of cou-  
rage. Saturne (they say) is cold, Mars hot, and Jupiter moderate.

The Regions subiect to the Planets, be they  
Northerne, the middle, and the Southerne.

**T**O the Northerne, Mars is Lord and Gouvernour, for they  
be his darlinge, for they haue alwayes embraced the Arte  
Military, Europe

To the middle, Jupiter is Lord and Gouvernour for inclike  
affaires, they procure most eminent, Asia.

To the Southerne, Saturne is Lord and Gouvernour for the  
extraordinary gifts of the mind eyther wit or subtilty. Africa.

Husbandicall

# A Prognostication.

## Husbandicall Elections in planting, grafting, and sowing.

To all things there is an appointed time, and a time to euery purpose vnder the Sunne. A time to plant, and a time to plucke vp.

**B**Efore you plant or graft, consider the winde, for if it be in the North, or North-east, & by north cease thy labour because the North wind, called Septentrio causeth dry colds, and hurteth the fruites and flowers of the earth: The North-east, and by North called Boreas, is cold and dry without raine, it hurteth the flowers and fruites of the earth, and specially the vines when they bud.

Generally plant or graffe in the ending of Autumne, or beginning of Spring: especially the moone increasing in Taurus, Virgo, Capricorne, or Pisces.

Fell timber from Midsummer to Christmas, especially from the change to the full, in dry dayes and not in wet and windy, leaning such as be winde fallen, as well for that the timber is not permanent, as also that Astrologers say, the houses built therewith, are subject to danger in time of tempests: you are best before the rectifying of the sap to cut the timber tree round about, vntill you come neere vnto the end of the sappe, and so leaue the tree growing vntill you see that the sap hath all runne downe, and ceased dropping; whereby you haue purified the tree.

Fell coppice in the first quarter, the moone in ♀, ☾, or ♀.

Sheare sheepe in the increase.

Seld all the increase, the moone in ♀, ☾, ♀.

Ent vines, in February, or September, the ☽ in ♀, ☾, or ♀.

Remoue trees the last Quarter, in Nouember, or February, the ☽ in ♀, ☾, ♀.

Sow seedes, whose fruite will be round, three, or four dayes before the full.

But to sow for stork, take the increas from February, to Iune.

The moone in ☾, ☾, ♀, or ♀, in ♀, or ☾, with ♄, is a fit time to plant, gratt. or to do any kind of husbandry, the like is the moone in ☾, in ♀, or ☾, with ♄, or ♀.

A definition of Astronomy.

**A**stronomy is the perfect knowledge of the miraculous workings of the Planets, and Heavens, (and especially of the Sunne and Moone) whereby is caused the variety of times, dayes, yeares, and ages, as well for consideration of sacred propheties, accomplished in due time foretold, as for high mysticall solemnities holding. And for all other humane affaires, conditions, and covenants upon certaine time betweene man and man, with many other great uses, &c. As the Eclipses of the Sunne and Moone, the knowledge whereof is not only diuine, but also very profitable: for by the Eclipses, the Longitude of places, as Gemma, Frisias, taught, may be found out on from the other.

The naturall cause of the Sunne Eclipsed, is nothing else but the direct putting the body of the Moone betweene the Sunne and our sight, which chanceth once at the new moone. And therefore concerning the darknesse at the death of Christ, the Eclipse was then supernaturall or miraculous, for it was at the full of the moone, as ancient histories record, for St. Augustine sayth, that the Jewes were wont to keepe their feast of Pascheouer, alway at the full of the Moone, and at that time Christ suffered. And therefore Dionysius a Senator of Athens beholding that Eclipse (Athens being 780. miles north, west, and by west from Hierusalem) cried out saying, *Aur Deus naturæ patitur, aut mundi machina dissoluitur*: The God of nature this day suffereth, or else the World must needs perish for ever, which Dionysius was converted to the faith of Christ by St. Paul; and after that he converted the French-men, to the faith of Christ.

The cause of the Moone Eclipsed is, the Sunne being in the contrary point to the full moone, enforceth the shadow of the earth, then put directly betweene the Sunne and the Moone, toward the moone, hiding more or lesse of the moone, as she differeth from the eclipticall. Some obserue pestilent plagues, Warre, and great dearth to ensue those Eclipses, which all I desire God to avert from his chosen. Amen.

## A Prognostication.

Of the Eclipse this Present  
yeare. 1625.

**A**n Eclipse of the Moone will happen the 13. day of March, the 11. houres, and 56. minutes after noone, when as the Moone passing by the Head of the Dragon, shall bee found opposite to the Sunne, the digits eclipsed being 2. and 16. minutes from the beginning to the end, 1 houre, 47 minutes.

The Earth, and the Water doe make together one whole Spherical or round body, and that every great Circle, as well thereof as of the Heavens containeth 360. Degrees, a degree containeth 60 Italian miles, which miles are used both of Astronomers and Geographers; but our English mile is longer then the Italian mile by 280 feet;

The Circure of the earth in the Aequinoctiall Circle that girdeth the earth in the very midd is divided into 360. Degrees or 21,600 Italian miles, the diameter of the earth containeth 68728. Italian miles, where our Antipodians inhabiting that part of the earth called Novaguisca and the Islands of Salomon Isabell, and Nombor de le us inhabite, being distant from our Meridian east neere 12. houres lying in the 110 Degrees of longitude, and 52 of South latitude.

# A Prognostication.

## The vse of the Precedent Table.

**A** Man died, who gave by Will to a child then borne, 100 lb. His executors agreeeth to set out the 100 pound to occupy till the child come to the age of 21 yeares, covenanting with the party to pay the interest, and the interest vpon interest, as it groweth due after the rate of 10 pounos per Annum: What will it be at the end of 21 yeares. I looke in the Table ouer against 21 yeares, and there I finde 740 pounds, 10 shilling, 6 pence, so much it amounteth vnto, in 21. yeares.

The vse of the second Table is this, there is a child borne, what mony shall I giue in hand to bee inist a 100 pounds at the end of 21. yeares after the same rate of interest vpon interest. I looke in the second table ouer against 21 yeares, and there I find 13 pounds, 10 shillings, 3 pence, so much I must deliuer in hand.

The vse of the third Table is this, I buy a lease to wit 10 lb. ouer the rent, per annum. This lease is to endure 15 yeares, what shall I giue for this 10 pounos per annum for 15 yiares, reckoning my money after Comp. Interest. I looke in the third Table for 15 yeares, and ouer against it, I find 76 pounds 1 shilling, and 2 pence. And therefore by the Common.

**R**ule of Three, if 10 pound, giue 76 pound, 1 shilling, and 2 pence, what shall 100 pound bee worth; therefore multiply 100 pound 76 pound, 1 shilling and 2 pence, parting the product by 10 pound, so haue you 760 pound, 12 shilling, and 1 penny, and so much was your annuity of 100 for fifteen yeares, worth to be payd now in hand for the same.

Conclusion.

Conclusion.

- W
- I. In God the Lord we put our trust,  
for he doth vs defend,
  - A. And ayde vs now and euer more  
on him we do depend;
  - C. Come praise him for his great mercy,  
for he our God shall be;
  - O. O saue therefore our gracious King  
thy seruant Lord is he.
  - B. Beate backe from him his enemies all,  
and them bring to decay,
  - I. In thy presence let them consume,  
and quickly passe away.
  - R. Regard also his progenie,  
and guide them with grace;
  - E. Endue them with thy holy Spirit  
thy Gospell to embrace:
  - X. Xalt his Throne Lord in thy sight,  
like glorious Sunne in Heauen so bright.
